CyBio® Stacker

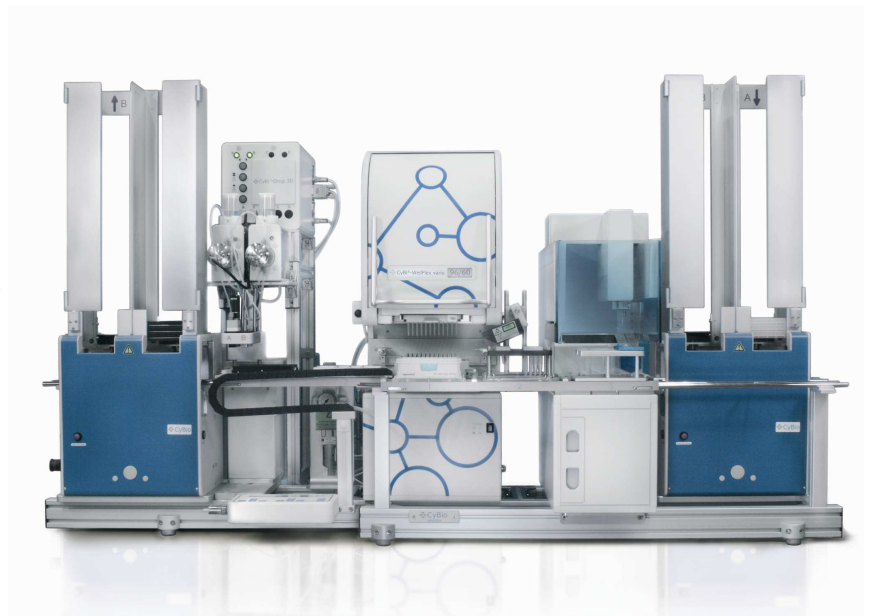

Since more than 20 years **CyBio** develops and produces first-class simultaneous pipettingsystems, which make the grade of the most different requirements of use and flow capacity in the area of Life Science and the research for active pharmaceutical ingredients. As a leading manufacturer CyBio offers quality and reliability in the everyday laboratory routine, from the single CyBi®-Well-Pipettor up to completely customized solutions.

OLPE produces the Stacker für CyBio die Stacker for the stocking of microtiter plates. The Stacker allows the fully automated and efficient storage and processing of a large number of microtiter plates. Thereby the Stacker can be integrated space-saving into the systems of the CyBio pipetting product line.

To this product line belongs the new CyBi®-WellFlex vario, a combination of three different liquid handling tools in one compact work station. With an excellent cost-performance ratio the CyBi®-WellFlex vario enables the entire automation of test series with a variety in applications. Moreover it always offers optimum precision, even with the smallest volumes.
